CAREER PROFILE

I've been coding since a young age and got to experience a variety of tech stacks and companies of different sizes and culture.
I've worked as a freelancer with local and remote companies, I lead the technology front in several companies (some of whom were acquired) and I was an early employee in few startups, and created the infrastructure and workflows which the R&D department and the system were built upon.

EXPERIENCES

Senior Software Developer

Gefen Technologies, Tel-Aviv

May 2017 - Aug 2018

My work included fullstack development of new features, refactoring and scaling existing services as the demand grows and bettering our development process and culture in the R&D department.
In addition, I have worked with our HR on training plans to improve the developers in Gefen, and managing our internal "University" where our team members teach each other about different subjects.
My passion for efficiency and team-scaling expressed in Gefen as well by different tools I've created and processes I have set to make our work easier, communications more effective and clear, spread knowledge almost automatically and speeding up our development process as a result.

CTO

GLLU, Tel-Aviv

Oct 2016 - April 2017

I was the first member of the tech team, I've created the infrastructure upon which the product was built on. In addition, I was in charge of hiring developers, creating a healthy culture and development processes while maintaining pragmatism and pushing the company forward.

Fullstack Developer

dapulse (monday.com), Tel-Aviv

Jan 2015 - Sep 2016

I started at dapulse (now known as Monday.com) when it was still a small company with 4 fullstack developers.
The team is very product oriented, and I was in charge of building each feature end-to-end, deploying it, tracking the engagement and supporting the customers.
In addition, I created a lot of dev tooling, backend scaling improvements and was in charge of DevOps in a certain period.
